## SUMMARY

DevOps Engineer with 5+ years of experience building scalable and secure infrastructure on AWS and Azure. Built CI/CD pipelines using Jenkins, Git, Docker, and Terraform, reducing deployment time by 30% and cutting Docker image size from 300 MB to 20 MB to save cloud costs. Implemented Prometheus and Grafana monitoring and cost-optimization practices to improve reliability and control spend.

## SKILLS

- **Cloud Platforms:** , Azure (VMs, Storage, AD)
- **CI/CD Tools:** Jenkins, GitLab, GitHub Actions, Bitbucket, Maven
- **Containerization & Orchestration:** Docker, Kubernetes, ECS, AKS, Azure container registry
- **Infrastructure as Code (IaC):** Terraform, CloudFormation
- **Monitoring & Logging:** Prometheus, Grafana, CloudWatch
- **Scripting:** Bash, Python
- **Version Control:** Git, GitHub
- **Project Management:** Jira, Azure DevOps Boards
- **Database:** MySQL, PostgreSQL

## WORK EXPERIENCE

### Autotroph Infotech

Mar 2025 - Nov 2025

DevOps Engineer

Surat

- I have worked extensively with Amazon Web Services (AWS), using core services such as Virtual machine, S3, IAM, and Virtual Private Cloud (VPC) to design and manage cloud infrastructure.
- Designed and implemented complete staging and production environments on Google Cloud Platform (GCP), optimizing infrastructure for scalability, security, and high availability, which improved system reliability and reduced downtime.
- Built and managed Jenkins CI/CD pipelines integrated with Bitbucket, automating build, test, and deployment workflows, which accelerated release cycles and reduced manual errors
- Configured Prometheus and Grafana for real-time monitoring and alerting, improving observability and response time to incidents by allowing prompt identification and resolution of issues
- Optimized Docker images, reducing container footprint from 300 MB to 20 MB, improving deployment speed and cutting AWS costs.
- Containerized applications using Docker and deployed them on ECS, AKS enabling autoscaling and faster release cycles, which enhanced deployment efficiency and reduced downtime
- Implemented Terraform for infrastructure provisioning, ensuring reproducible and version-controlled deployments, which improved system reliability and consistency in resource management
- 

### NEXXOFT INFOTEL LIMITED

Jan 2021 - Mar 2025

DevOps Engineer (SBI Project)

Remote

- Managed Linux infrastructure across AWS and Azure leveraging core services such as EC2, VPC, RDS, Azure VMs, Load Balancer, and Storage, improving system reliability and uptime.
- Implemented S3-based log storage and backup automation, simplifying data retrieval.
- Architected CI/CD pipelines integrating Git, Maven, Jenkins, and AWS/Azure, improving deployment speed.
- Enhanced Jenkins with master-slave architecture, achieving a 30% reduction in deployment time.
- Automated build processes using periodic builds and Poll SCM webhooks.
- Managed Azure VMs, Storage, and Active Directory, ensuring secure access and high availability.
- Streamlined project management using Jira for cross-team collaboration, leading to improved efficiency and seamless communication
- Developed Dockerfiles and container images, deployed via JFrog Artifactory for scalable deployments.
- Collaborated with development and operations teams to implement infrastructure changes through Git version control, ensuring all updates were peer-reviewed and compliant with best practices.
- Integrated Ansible with Jenkins to automate post-deployment configurations, improving deployment reliability and reducing downtime.

## CERTIFICATIONS

- Udemy Certifications: Ansible, Kubernetes, Docker, Jenkins
- Certified DevOps Engineer - IIT Roorkee (Intellipaat Program): Certificate:  
<https://tih.iitr.ac.in/certificate/intellipaat/IPTIH2412076.jpg>

## EDUCATION

**Dr. Bhimrao Ambedkar University**

*Bachelor of Science (B.Sc.)*

**Aug 2016 - Oct 2020**
