DevOps Engineer | AWS | Docker | Kubernetes | Terraform | Jenkins
| CI/CD | Open to Work
Surat, Gujarat, India

Summary

DevOps & Cloud Engineer with hands-on experience building fast, reliable, and automated infrastructure on AWS. I specialize in CI/CD pipelines, containerization, and monitoring using Jenkins, GitLab CI/CD, Docker, Kubernetes, and AWS services.

I have reduced deployment time by 40%, improved application uptime to 99.9%, and automated infrastructure workflows using Ansible, Jenkins, and AWS CodePipeline.

I have also containerized multiple applications using Docker, improving environment consistency and portability while reducing cloud costs by nearly 30%.

I enjoy designing resilient CI/CD pipelines, optimizing Linux systems, and implementing end-to-end observability using Prometheus and Grafana. My focus is on enabling engineering teams to deliver with speed, stability, and confidence.

Currently seeking DevOps Engineer / Cloud Engineer roles focused on cloud-native automation, scalable AWS architectures, and operational excellence.

If you're building production-grade infrastructure that needs to be faster, automated, and scalable, let's connect.

Experience

Autotroph Infotech

1 year 3 months

Devops engineer

March 2025 - Present (1 year 3 months)

Surat, Gujarat, India

DevOps Engineer

March 2025 - November 2025 (9 months)

Surat, Gujarat, India

- Designed and deployed complete staging and production environments on AWS, improving scalability, security, and high availability, resulting in significantly reduced downtime.
- Built and managed Jenkins CI/CD pipelines integrated with Bitbucket, automating build, test, and deployment workflows across environments.
- Administered and deployed core AWS services including ECS, EC2, Lambda, Route53, ECR, and RDS, ensuring smooth and reliable application operations.
- Implemented Prometheus + Grafana monitoring stack, enabling real-time visibility, actionable alerts, and faster incident response.
- Optimized Docker image sizes from 300MB to 20MB, enhancing build speed and reducing AWS infrastructure costs.
- Containerized multiple applications using Docker and deployed them on ECS with autoscaling, enabling faster release cycles and improved system resilience.
- Provisioned cloud infrastructure using Terraform, ensuring reproducible, version-controlled deployments and consistent AWS resource management.

NEXXOFT INFOTEL

DevOps Engineer

May 2021 - March 2025 (3 years 11 months)

Hyderabad

- Administered and maintained GitHub SCM, including repository setup, user management, 2FA enforcement, and overall GitHub server administration.

- Deployed and managed Linux-based infrastructure on AWS — including EC2, ELB, EBS, S3, IAM, VPC, and RDS — ensuring secure, scalable, and production-ready environments.
- Created and managed S3 buckets for log storage, backups, and cross-environment data retention.
- Built end-to-end CI/CD pipelines integrating Git, Maven, Jenkins, and AWS, optimizing build and deployment workflows.
- Managed Jenkins administration including user roles, plugin configurations, and master-slave node setup to distribute load and improve build performance.
- Configured automated build triggers using Poll SCM, Build Periodically, and webhook-based automation.
- Installed, configured, and optimized Nginx servers to support application deployments and load balancing requirements.
- Utilized Jira for sprint management, issue tracking, and cross-team collaboration.
- Developed Dockerfiles, built Docker images, and pushed containers to JFrog Artifactory, improving artifact distribution and deployment consistency.

Education

Dr. Bhim Rao Ambedkar University, Agra

Bachelor of Science - BS, Agriculture, General · (March 2016 - September 2020)
